

#INSIGHT 1:

Deaths per year due to malaria in Senegal have been halved since 2007. From that dashboard, I clicked on Senegal on the map, this showed deaths due to malaria for each year from 2000 to 2014. Before 2007, there were about 1400-1500 deaths per year. After 2007, starting in 2008, deaths were reduced to about 600-700 per year. A decrease in number of deaths is seen as one moves from graph depicting deaths in 2007 to 2008.

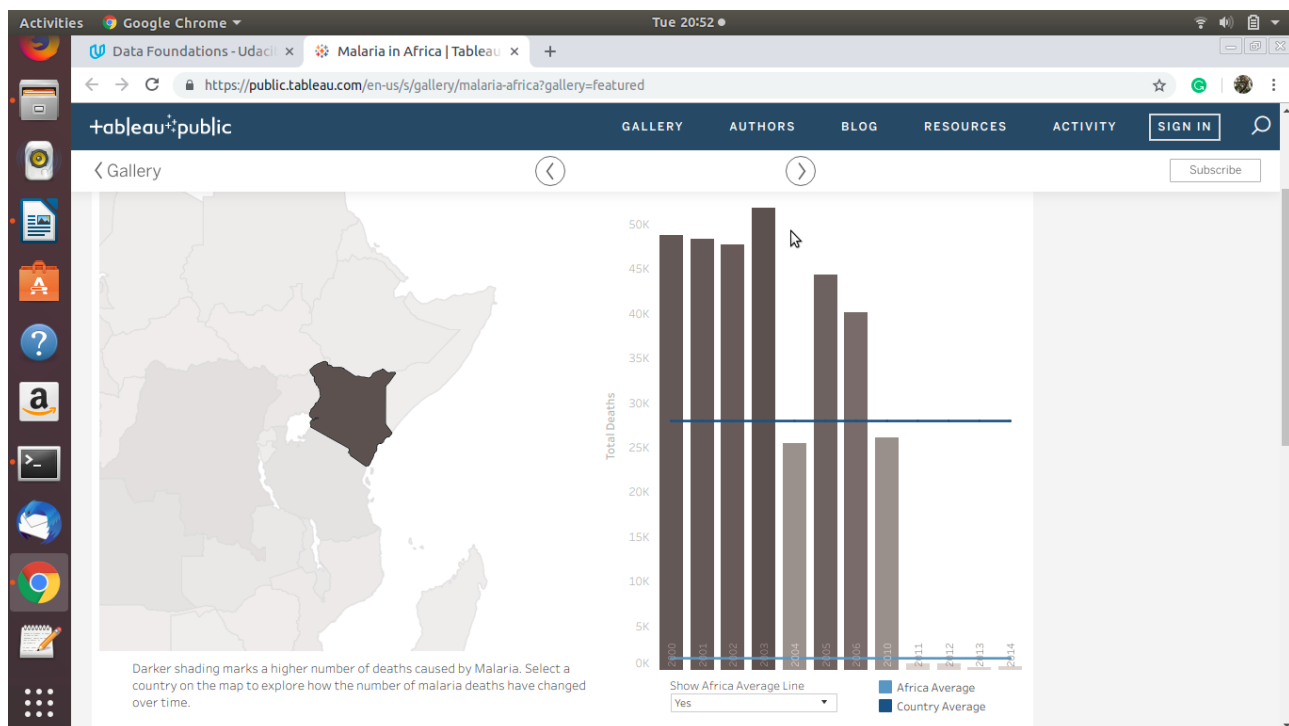

Death rate was least for year 2011, which was around 500.

#INSIGHT 2

From Malaria deaths in Africa dashboard I clicked on Kenya and concluded that Kenya is at top in most number of deaths, it can be observed from the image below that a decrease in number of deaths can be seen. Before 2011 number of deaths per year were between 25000-30000, from 2011 number of deaths reduced by a considerable amount with less than 1000 deaths in and

after 2011.

#INSIGHT 3

From Malaria deaths in Africa dashboard I clicked on Democratic Republic of Congo and concluded that numbers of deaths due to malaria has seen a drastic increase from 2003 to 2004. With less than 2000 deaths in 2003 and around 14000 in 2004 a considerable increase in number of deaths is seen.
